

Why Choose Biolog Lab Services?

Biolog Lab Services provides comprehensive pathogen testing for many different food types.

Key features

- **Quick Turnaround:** Reliable results in as little as three days.
- **Fully Certified:** Backed by global validations and accreditation, including AOAC, AFNOR, and ISO 17025, our pathogen test meets strict regulatory requirements.
- **Affordable:** Our technology offers sensitivity and specificity at an affordable price.
- **High-quality:** Our test uses gold standard USDA-approved and FDA-endorsed molecular science.
- **Clear Reports:** Our tests deliver easy-to-interpret positive/negative results, ensuring consistent and actionable outcomes in a range of food matrices.

Science that keeps food safe

Multiple regions of each target DNA are recognized, ensuring specificity even in complex food matrices. When a pathogen is present, DNA amplification triggers a bioluminescent reaction, generating a signal captured by our molecular detection instrument, providing a clear positive or negative result for each pathogen tested.

biolog

Biolog has the tools, services, and support to provide comprehensive cellular characterization and multi-omic identification for thousands of bacteria, yeast, and fungal species. Our products enable the growth and phenotypic profiling of microbial and mammalian cells for a wide range of applications, including pre-reduced media and gloveless chambers that support culturing organisms under strictly anaerobic conditions.
